Message from Converus President and CEO

Yes World – We Have an Automated Polygraph!

Hi,

[EyeDetect+](#) continues to make new friends in the polygraph world as more examiners see and understand it has the same capabilities of a traditional polygraph — except in a completely automated and less intrusive manner.

While attending the 56th annual American Polygraph Association (APA) seminar that kicked off Aug. 28 in Orlando, we showcased our technology to examiners from all over the world. Upon learning EyeDetect+ monitors and records similar physiological activity as polygraph while adding ocular data from the standard [EyeDetect](#) test, they were surprised and impressed. Others were impressed EyeDetect+ test results data can be exported and opened in their polygraph software of choice for further analysis. And most were pleasantly surprised we have replaced the arm cuff with a less intrusive method of measuring blood pressure.

For whatever reason, the invention of a completely automated polygraph testing process is still a "best kept secret."

So let me repeat: **We've added the polygraph testing channels to our credibility assessment technology.**

Upon learning you get the same results without the uncomfortable arm cuff, without potential examiner bias, and at lower cost, more examiners reconfig a next natural and logical evolution. Many took a stim (number) test and some did in languages other than English. Those that applied counter measures were unsuccessful. This only strengthened the validity of the EyeDetect brand.

Bottom line: There's now a more effective and efficient way to conduct polygraph exams by using an advanced automated testing process. For more information, check out this [video](#) and [flyer](#).

New Service Partner

A warm welcome to AENE-911 our new Converus Service Partner in Ecuador.

We continue to attract the best of the best in the credibility assessment industry. (Want to become a Converus Service Partner? [Click here.](#))

Click your email "forward" button to send this email to others interested in credibility assessment. And please share industry news with us! We'd love to hear from you. Email: info@converus.com.

Converus at APA

Converus had the opportunity to showcase its technology to examiners from across the world at the 56th annual American Polygraph Association (APA) seminar last month in Orlando. Many examiners were surprised to learn the polygraph testing process has now been automated, thanks to the award-winning EyeDetect+ technology. Below is a montage of photos from the event. It includes our booth, attendees taking the number test, and the open house we hosted one evening.

(online using MS Teams)

This course will also be offered in Spanish on November 15-17. [Click to register or see the agenda.](#)

About Converus

Converus provides scientifically validated credibility assessment technologies. EyeDetect®, which detects deception by measuring involuntary eye behavior, is a fast, accurate, affordable, noncontact, scalable, and fully automated option to polygraph. EyeDetect+ is the world's first automated polygraph, making the testing process impartial, accurate, and less intrusive (than a traditional polygraph). It assesses credibility by monitoring and recording ocular activity plus physiological activity similar to a traditional polygraph. Customers worldwide use the EyeDetect product line for screening and investigations to help protect countries, corporations and communities from corruption, crime and threats. Converus is headquartered in Lehi, Utah, USA. Visit: converus.com
